Debug File: False / True. If it is True, it create a file LogService.txt for debug task. This file can be find in system program file of installed application

6. Caveats:

- 1. During the initial setup or after changes to specific parameters, you should restart this service.
- 2. The first time, all users will be synchronized. After that, the plugin will only look for new changes on the identity page.
- 3. This tool is triggered by actions in Identity page. For smooth operation, please ensure that a final change on this page have already been made.
- 4. When a user is Deleted, it could cause that user will not be replicate immediately, instead of that, disable it and after a few minutes you can deleted.
- 5. You should restart this service, as well as the Morpho Manager Service, after applying a massive user deletion in ACM.
